# Introduction

The **Interoperable XFI (IXFI) Protocol** introduces a groundbreaking approach to cross-chain interoperability by leveraging **XFI as the primary gas token**. This enables **gasless cross-chain swaps** through a **meta-transaction relay system** while enhancing XFI's utility across multiple blockchain networks.

By addressing the **limitations of CrossFi's existing bridge**, IXFI transforms **CrossFi's ecosystem** into a fully interoperable and programmable cross-chain infrastructure. This innovation allows seamless asset transfers, smart contract execution, and data messaging across diverse blockchain ecosystems.

**IXFI Labs**

# Problems

## CrossFi Chain's Advantages

- High Scalability
- Interoperability
- Hybrid Architecture
- Non-Custodial Transactions
- Crypto-Fiat Payment

## Problems in Token & Bridge

- ❖ Narrow Scope in Bridge
- ❖ Limited Functionality
- ❖ Underutilization of Token
- ❖ Restricted Asset Support

# Solutions

## Key Features

### Gasless Meta-Transaction System

- Pay gas fees exclusively in XFI, regardless of the blockchain they are transacting on.
- Supports Ethereum, BNB Chain, Polygon, Base, and any EVM-compatible blockchain.
- Simplifies the user experience by abstracting gas fees and reducing friction in cross-chain swaps.

### Enhanced XFI Interoperability

- Replace the need for a wrapped XFI (WXFI) by introducing a native cross-chain XFI token.
- Enables data transmission and smart contract execution alongside asset transfers.
- Expands XFI's programmability across different chains, improving developer accessibility.

# Solutions

## Use Cases & Ecosystem Expansion

-  Cross-Chain DEX Aggregators & Swap Platforms
-  Cross-Chain Lending & Borrowing Protocols
-  Multi-Chain Liquidity Provisioning & Yield Aggregation
-  Cross-Chain Staking & Yield Farming
-  Decentralized Cross-Chain Messaging & Smart Contract Execution

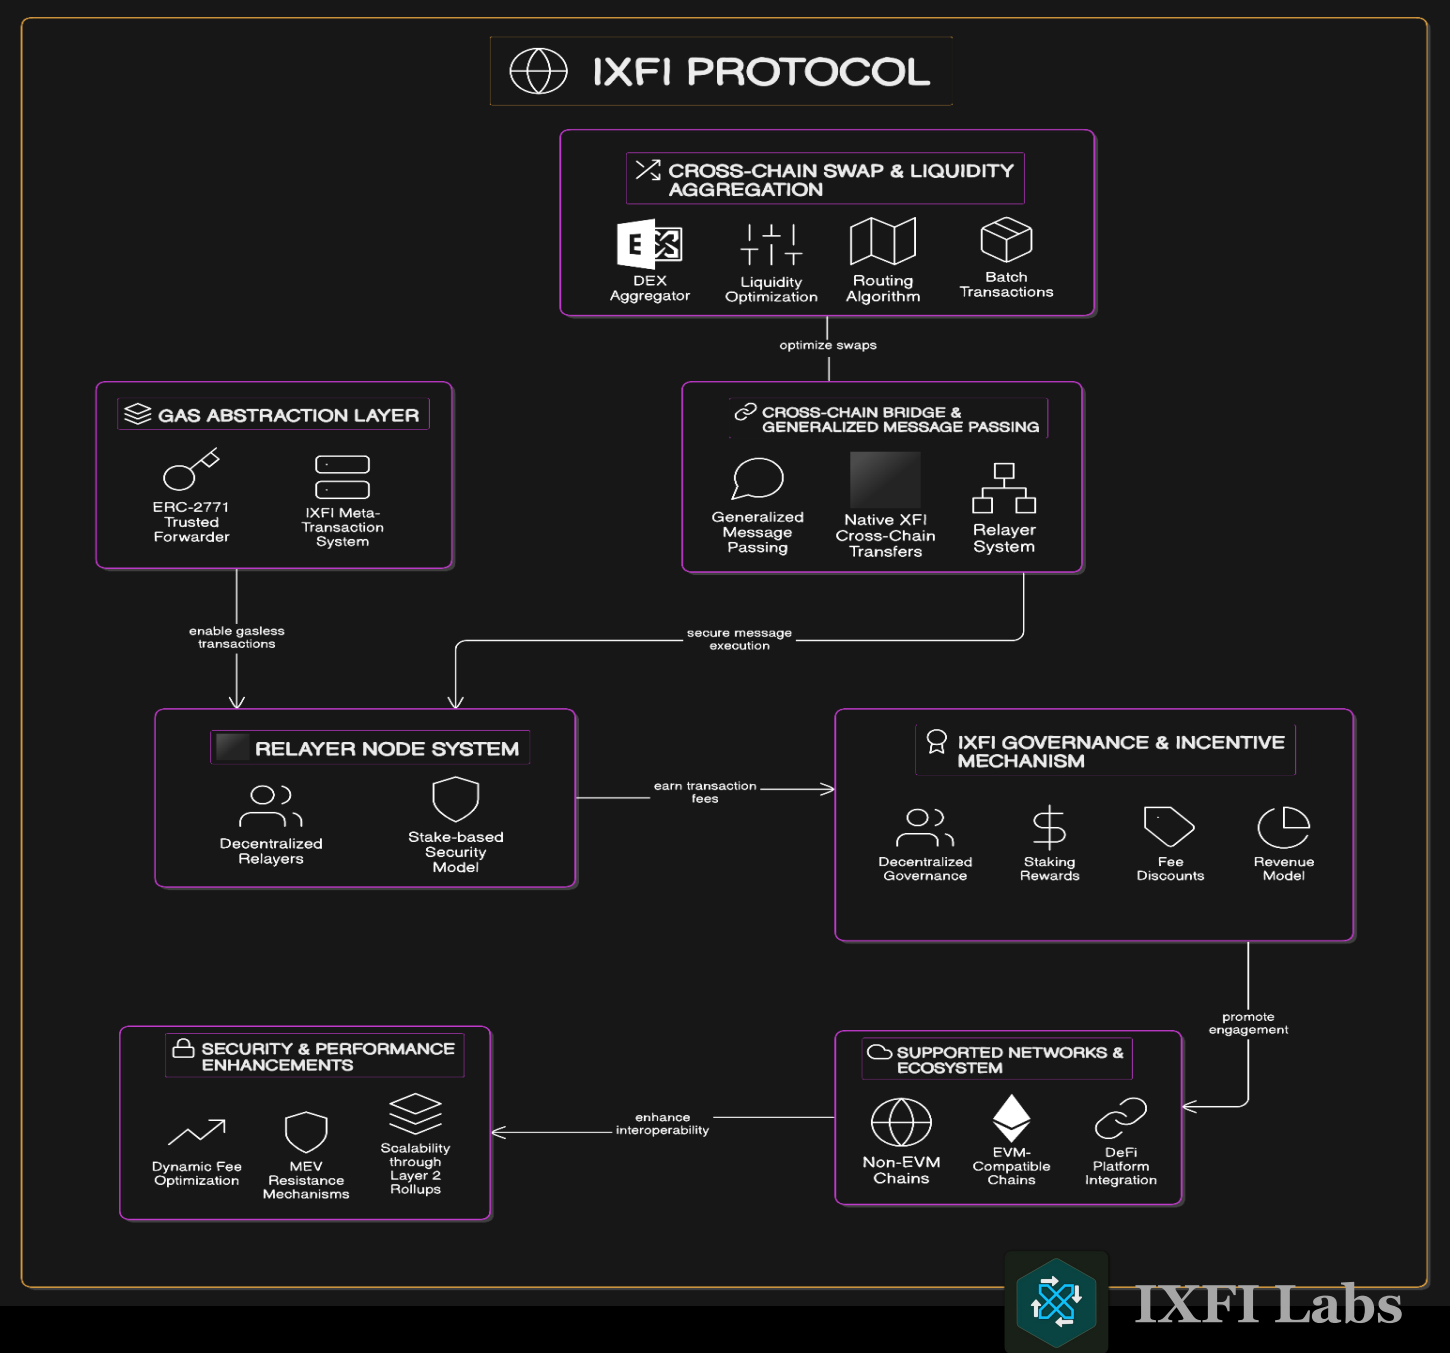

# Solutions

## Strategic Impact for CrossFi

- By implementing IXFI, CrossFi will establish itself as a leader in blockchain interoperability, significantly enhancing XFI's core utility while driving adoption and network growth.
- This solution lays the groundwork for truly seamless, gas-efficient, and highly programmable cross-chain transactions—a critical step toward scaling DeFi beyond siloed ecosystems.

# Roadmap

# Estimated Budget

Stage	Cost (USD)
Smart Contract Development	\$20,000 - \$50,000
Relayer Node System & Cross Chain Bridge	\$20,000 - \$350,00
Frontend & Backend Development	\$20,000 - \$350,00
API & SDK Deveopment	\$20,000 - \$40,000
DevOps & Infrastructure Setup	\$10,000 - \$20,000
Mobile App (Optional)	\$10,000 - \$20,000
<b>Total</b>	<b>\$100,000 - \$200,000</b>

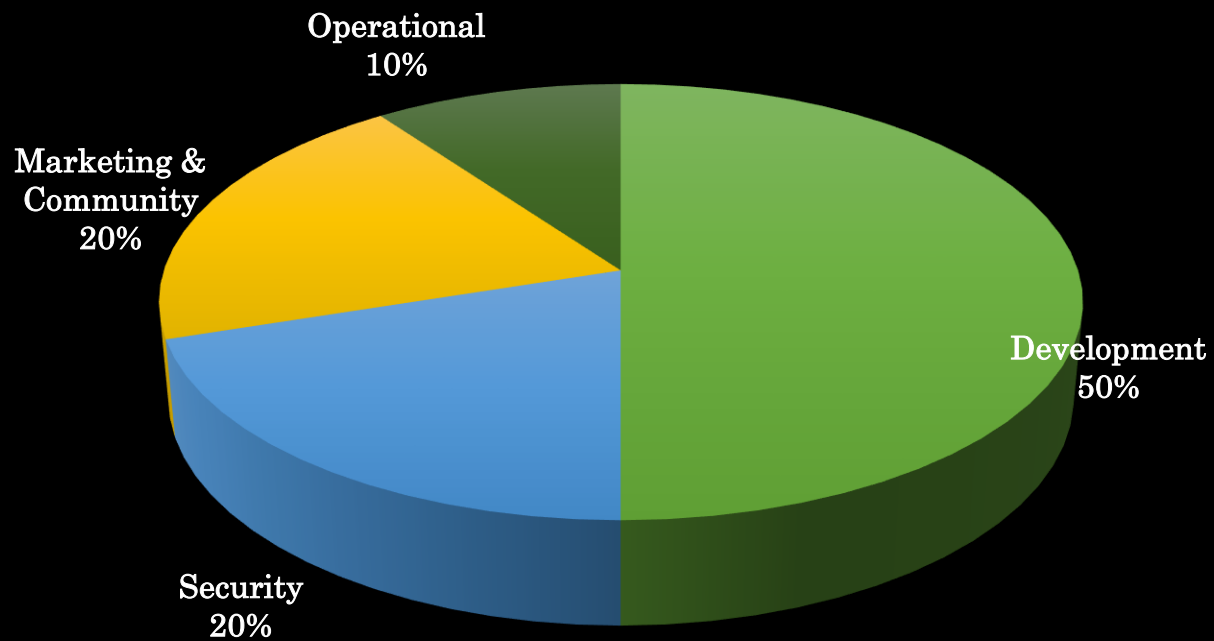

Note: This budget covers development only and does not include security, operations, or marketing expenses. Additionally, API & SDK development, mobile app creation, and DevOps & infrastructure will not be considered during the early stages of development.

**Minimal Cost: \$60,000, Average Cost: \$80,000**

**IXFI Labs**

# Fund Usage

■ Development      ■ Security  
■ Marketing & Community   ■ Operational

- ❖ **Product Development (50%)**
- ❖ **Test & Security Audits (20%)**
- ❖ **Marketing & Community Growth (20%)**
- ❖ **Operational Expenses (10%)**

# Our Team

Our core team consists of seasoned professionals with extensive experience in both Web2 and Web3 development. With a deep understanding of blockchain infrastructure, we have successfully built and contributed to various decentralized applications, including cross-chain DEXs and DEX aggregators.

**Wayne Poon, Malaysia**  
Co-Founder, Owner  
Protocol Architect

**Cha Sui Soon, Malaysia**  
Co-Founder  
Backend + Dev Ops

**Ilyasa Sazali, Malaysia**  
Co-Founder  
Frontend + Web3

# Thank You
